

A RENEWED LIFESTYLE

Gain a brighter perspective. The **AcrySof® IQ Vivity™** Lens gives you a renewed outlook on life. In a clinical study, 106 patients were asked about their experience with the **AcrySof® IQ Vivity™** Lens:

OVER 90% reported that they were satisfied with their vision.^{4,†}

94% of patients reported rarely or never needing eyeglasses or contacts at distance.¹

† In response to the question asked 6 months after surgery, "In the past 7 days, how satisfied were you with your vision?"

CATARACT BASICS

Cataracts form gradually as our eyes get older, and 9 in 10 Americans develop them by the time they're 65.² The good news is that cataract surgery is one of the safest, most common, and most effective procedures performed today.³

At the time of cataract surgery, you can opt for the **AcrySof® IQ Vivity™** Lens, which provides a greater range of vision than a standard monofocal lens.⁴

THE PROCESS

- 1 CATARACT REMOVAL**
Through a tiny incision, the surgeon removes your clouded lens.
- 2 LENS INSERTION**
The surgeon replaces your original lens with the **AcrySof® IQ Vivity™** Lens.
- 3 VISION RENEWED**
The **AcrySof® IQ Vivity™** Lens enhances your vision so you'll be free of cataracts.

TALK TO YOUR EYE CARE PROFESSIONAL ABOUT THE ACRYSOF® IQ VIVITY™ LENS

AcrySof® IQ Vivity™ Extended Vision Family of IOLs IMPORTANT PRODUCT INFORMATION

CAUTION: Restricted by law to sale by or on the order of a physician.

DESCRIPTION: The AcrySof® IQ Vivity™ Extended Vision IOL is a type of IOL used to focus images clearly onto the back of your eye (retina) to allow clear vision after the cataract removal. The AcrySof® IQ Vivity™ Extended Vision IOL provides clear distance vision (e.g., for watching children playing in the backyard). In addition, the AcrySof® IQ Vivity™ Extended Vision IOL allows for better intermediate (working on a computer, applying makeup or shaving) and some near (reading, knitting) vision compared to what a monofocal IOL would provide. The AcrySof® IQ Vivity™ IOL is not a multifocal IOL, as it uses a new Wavefront-Shaping technology to provide the broader range of vision. There is a chance you may still need glasses for distance, intermediate, and/or near vision. You will get the full benefit of the AcrySof® IQ Vivity™ Extended Vision IOL when it is implanted in both eyes. Please discuss with your eye doctor whether this is the right IOL for you.

POTENTIAL SIDE EFFECTS: There are some side effects that can be associated with the design of IOLs that provide a broader range of vision, which may be worse than with a monofocal IOL. These side effects include visual disturbances such as glare, rings around lights, starbursts, and a decrease in ability to distinguish objects from their background, especially in dim lighting. These side effects may make it more difficult to see in some situations. Contrast sensitivity, an important measure of visual function, is the ability to distinguish objects from their background, especially in dim lighting. In the AcrySof® IQ Vivity™ IOL clinical study, contrast sensitivity in dim lighting was reduced in patients who received the AcrySof® IQ Vivity™ IOL compared to those who received the Monofocal IOL. A toric IOL corrects astigmatism only when it is placed in the correct position in the eye. Some patients may have some level of astigmatism remaining after IOL placement, especially if they had a lot of astigmatism before surgery. There is also a possibility that the toric IOL could be placed incorrectly or could move within the eye. As with any toric IOL that provides an extended range of vision, if the lens is not positioned correctly in your eye, or if the amount of astigmatism to be corrected is calculated incorrectly, you may experience poor vision, you may need to wear glasses to see clearly at all distances, or you may need additional surgery to reposition or replace the IOL.

ATTENTION: As with any surgery, there are risks involved. Prior to surgery, ask your eye doctor to provide you with the Patient Information Brochure for the proposed AcrySof® IQ Vivity™ Extended Vision IOL to be implanted. This document will further inform you of the risks and benefits associated with this IOL. Discuss any questions about possible risks and benefits with your eye doctor, as well as your medical condition and any eye disease you may have.

DO MORE WITH REVITALIZED VISION

The **AcrySof® IQ Vivity™** Lens lets you embrace the moments that make your day.

Cataracts don't have to hold you back from doing the things you love. See what makes your life remarkable with the **AcrySof® IQ Vivity™** Lens.

REDISCOVER CLARITY

The way you use your vision shapes the way you live your life. The **AcrySof® IQ Vivity™** Lens shines a light on what's important in your every day.

In a clinical study with the **AcrySof® IQ Vivity™** Lens:

87.2% of patients were less likely to need glasses at arm's length in bright light versus 57.6% of patients with a standard lens.¹

46.1% of patients were less likely to need glasses up close in bright light versus 16.2% of patients with a standard lens.¹

 Patients reported less bothersome glare.^{1,*}

*Based on a questionnaire at 6 months.

A LENS FOR LIVING IN YOUR MOMENT

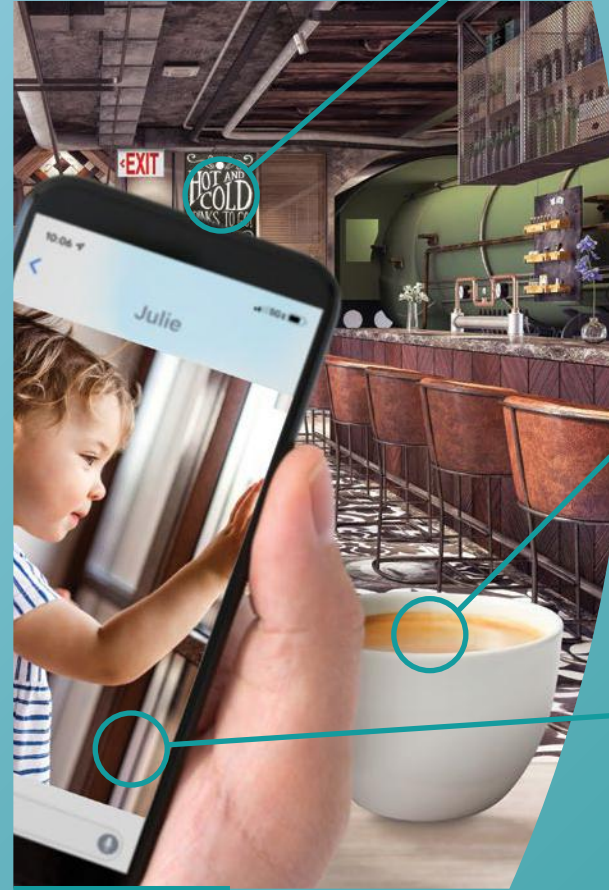

Choose a lens that revitalizes your lifestyle. The standard cataract replacement lens, which is also called a monofocal lens, allows you to see far away. The **AcrySof® IQ Vivity™** Lens allows you to see clearly at the crucial far and intermediate distances while still providing functional near vision.
