Cataract Basics

Cataracts form gradually as our eyes get older, and 9 in 10 Americans develop them by the time they’re 65. The good news is that cataract surgery is one of the safest, most common, and most effective procedures performed today.

At the time of cataract surgery, you can opt for the AcrySof® IQ Vivity™ Lens, which provides a greater range of vision than a standard monofocal lens.

THE PROCESS

1. CATARACT REMOVAL
   Through a tiny incision, the surgeon removes your clouded lens.

2. LENS INSERTION
   The surgeon replaces your original lens with the AcrySof® IQ Vivity™ Lens.

3. VISION RENEWED
   The AcrySof® IQ Vivity™ Lens enhances your vision so you’ll be free of cataracts.

A Renewed Lifestyle

Gain a brighter perspective. The AcrySof® IQ Vivity™ Lens gives you a renewed outlook on life.

In a clinical study, 106 patients were asked about their experience with the AcrySof® IQ Vivity™ Lens:

- OVER 90% reported that they were satisfied with their vision.
- 94% of patients reported rarely or never needing eyeglasses or contacts at distance.

4. Cataracts don’t have to hold you back from doing the things you love. See what makes your day remarkable with the AcrySof® IQ Vivity™ Lens.

Do More with Revitalized Vision

The AcrySof® IQ Vivity™ Lens lets you embrace the moments that make your day. Cataracts don’t have to hold you back from doing the things you love. See what makes your life remarkable with the AcrySof® IQ Vivity™ Lens.
A LENS FOR LIVING IN YOUR MOMENT

Choose a lens that revitalizes your lifestyle. The standard cataract replacement lens, which is also called a monofocal lens, allows you to see far away. The AcrySof® IQ Vivity™ Lens allows you to see clearly at the crucial far and intermediate distances while still providing functional near vision.

ACRYSOFT® IQ VIVITY™ LENS
Far away and arm’s length enhanced, up close improved

87.2% of patients were less likely to need glasses at arm’s length in bright light versus 57.6% of patients with a standard lens.¹

46.1% of patients were less likely to need glasses up close in bright light versus 16.2% of patients with a standard lens.¹

Patients reported less bothersome glare.¹*  

*Based on a questionnaire at 6 months.
